Notes

We saw a large avalanche (SS-N-R3-D2-O) that broke on a north facing <u>aspect</u>, around 2' deep, on weak snow near the ground. It was not clear whether it was one large avalanche or two that released sympathetically with one another. If one <u>slide</u>, this avalanche broke nearly 900' wide and slid around 1000' vertical. It broke during the most recent period of intense <u>loading</u> in this area, likely January 5th or 6th.
