

While looking for a recent avalanche from the flat bench above we triggered a similar sized slide directly adjacent to the previous slide. They broke on weak layers of facets and surface hoar that formed at the end of January. 2-3 feet deep and 150-200' wide. Photo: GNFAC

Longitude -110.00W Latitude 45.08N

**Avalanche Details:** Remote triggered persistent slab east of Mt. Abundance **Forecast link:** GNFAC Avalanche Forecast for Tue Feb 25, 2025
